TORMAX sets a new standard

Sliding doors for curbside and drive-through service

Curbside and drive-through establishments across the United States are discovering the advantages of the TORMAX service sliding door system. This unique door system was specifically engineered for use in drive-through restaurants, coffee shops and grocery stores. The various designs and configurations are already successfully proven in many stores. It is just as suitable for new buildings as it is for retrofits.

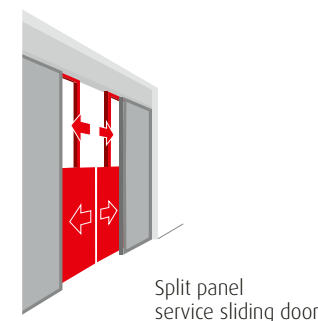

TORMAX service sliding doors are fully automatic and operate in two modes: (1) as a service window for standard drive-through servicing, and (2) as a convenient sliding door allowing your staff to step through directly to the waiting customer. The ability to change modes with the flip of a switch allows you to adapt to changes in traffic flow, maximizing customer throughput without sacrificing a personalized service experience.

TORMAX service sliding doors can be the lifeline for the retail service industry

- › Improve process efficiency
- › Accelerate workflow
- › Increase throughput – and revenues!
- › Improve hygienic safety
- › Enhance a “feel-good” customer exchange

Three product lines and five models to meet your needs

Units can be sized according to your specific needs, while the standard unit is 7'-0" wide × 7'-8" high in anodized or painted finishes. Standard top panel lights are factory glazed with ¼" thick clear tempered glass, and bottom lights are glazed with ¼" thick aluminum textured infill panels. The door system has on-board provisions to interface an air curtain and provide door status for security. The door system can be activated by buttons, touchless switches or RF devices; re-entry is by card access or key fob. Employees are protected from doors closing by light beam sensors and time-of-flight laser technology.

Split panel service sliding door

- › Automatic bi-part sliding door panels are split into an upper and a lower half
- › Upper panel opening for service window; simultaneous opening of upper and lower panels for walk-through service
- › With the flip of a switch, you can choose:
 - to open only the upper panels for a 32" × 40 ¾" service window
 - or to open the full panels for a 32" × 83" tall door

Half panel service sliding door

- › Automatic bi-part sliding doors with manual exterior door panels which close to form a counter for food trays, etc.
- › The server is positioned closer to the drive-through customer thanks to service window panels mounted on the exterior
- › Standard unit clear door opening 30" × 83"; service window opening 30" × 45 ½"
- › Hurricane impact unit clear door opening 28" × 82"; service window opening 28" × 44 ½"

“C” panel service sliding door

- › Automatic bi-part sliding doors with manual exterior service window panels
- › Enlarged “C” panel design reduces service window opening height for maximum energy efficiency
- › The server is positioned closer to the drive-through customer thanks to service window panels mounted on the exterior
- › Standard unit clear door opening 32" × 83"; service window opening 30 7/8" × 31"
- › Hurricane impact unit clear door opening 28" × 82"; service window opening 30 7/8" × 31"

the passion to drive doors

Your ideal partner for any automatic door system

TORMAX installed Europe's first automatic door in 1951. Today, we are a leading global manufacturer of technologically advanced, reliable and innovative door automation systems. As an independent Swiss industrial group with global operations, we offer the full range of automatic door systems and ensure their trouble-free operation throughout their lifetime.

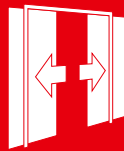

TORMAX will be pleased to advise you about suitable door systems and support you from design to manufacturing, supervising construction, installation and service. We can present you with innovative solutions, implement cost-efficient and reliable systems and attend to any special requirements you may have.
